Response to Amendment

This office action is in response to the amendment filed on 12/07/2005.

Claims 1-52 and 55-84 are pending for examination, claims 1-43, 67-83 have been withdrawn for prosecution; claims 44 has been amended, claims 53-54 have been canceled, and claim 84 has been newly added.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 44-52, 55-66 and 84, are rejected under 35 U.S.C. 102(e) as being anticipated by Langseth et al. (U.S. Patent No. 6,741,980).

As to claim 44, Langseth et al. (hereinafter referred as Langseth) discloses a system for processing data from one or more time series [e.g., Title; Abstract; col. 3, lines 9 – col. 4, lines 51], comprising:

Art Unit: 2161

- a) one or more processing modules for processing the time-stamped data and time series data [e.g., the unit 10, Fig. 1 and associated texts; wherein, the email sent out by a market update from a finance is an example of the claimed time-stamped data; and the displaying of the Daily Market Summary activity chart at Fig. 13 is an example of the claimed time series data];
- b) one or more connections for linking the modules in a network [e.g., the unit 24, Fig. 3 and associated texts];
- c) a first subsystem for activating the one or more processing modules and for moving the data through the network [e.g., the units: 44, 42, Fig. 2B and associated texts; col. 11, lines 45-50; col. 12, lines 4-33].

As to claim 45, except the features recited in claim 44, Langseth further discloses that the system including a type system [e.g., the channel databases system, col. 4, lines 16-23] comprising: (a) one or more types [e.g., col. 7, lines 10-11]; and (b) a relation among the one or more types [e.g., col. 7, lines 11-15].

As to claim 46, except the features recited in claim 45, Langseth further discloses that the system including a grammar to describe the types in the type system [e.g., the predetermined conditions for processing a service, col. 7, lines 56 – col. 8, line 13].

As to claim 47, except the features recited in claim 45, Langseth further discloses that the one or more processing modules comprise one or more ports [e.g., the

Art Unit: 2161

Channels 40 associated with the Data Distribution unit 42, Fig. 2A and associated texts; the Cisco PIX configuring processing, col. 21, lines 12-25].

As to claim 48, except the features recited in claim 47, Langseth further discloses that the one or more binding operators for creating the one or more connections to link two or more of the ports [e.g., the Internet binding processing of Fig. 7 and associated texts].

As to claim 49, the claimed feature – "at least one of the types are assigned to at least one of the ports" is met by the functions provided by ActiveX DLLs of MTS [e.g., col. 13, line 6-16].

As to claim 50, except the features recited in claim 49, Langseth further discloses that the system having: (a) a configure method for checking that the types on said ports that are linked by one of the connections are consistent [e.g., col. 20, lines 58-60].

As to claim 51, except the features recited in claim 44, Langseth further discloses that processing modules comprise: (a) a process data method to process the data [e.g., the method 10, Fig. 1 and associated texts].

As to claim 52, except the features recited in claim 51, Langseth further discloses that the subsystem executes the process data method [e.g., the unit 47, Fig. 3; Fig. 4 and associated texts].

As to claims 55-56, except the features recited in claim 44, Langseth further discloses that the processing modules comprise one or more input and output ports [e.g., the units: 200, Fig. 2A and associated texts].

As to claims 57 and 58, except the features recited in claim 56, Langseth further discloses that the sub-processing modules further comprise: (a) at least one end of data method to indicate that no more data will be provided to the one or more input ports of the processing modules [e.g., the end of jobs and end of services queuing technique, col. 24, lines 4-6].

As to claim 59, except the features recited in claim 56, Langseth further discloses that the processing modules input at least one input datum of the data on the input ports, process the at least one input datum to produce at least one output datum, and output the at least one output datum on the output ports [e.g., Fig(s). 4-5 and associated texts].

As to claim 60, except the features recited in claim 59, Langseth further discloses that a build-up delay method that computes how much time the processing module

Application/Control Number: 10/046,907

Art Unit: 2161

needs before the processing module can output the at least one output datum that is meaningful [e.g., col. 4, lines 5 – 28].

As to claim 61, except the features recited in claim 59, Langseth further discloses that the processing modules further comprise one or more timer methods to process one or more timers [e.g., the calendar like schedule processing, col. 7, lines 61-67].

As to claim 62, except the features recited in claim 61, Langseth further discloses that the one or more timers indicate when the processing modules should output the at least one output datum on the output ports [e.g., col. 3, lines 9-32].

As to claim 63, except the features recited in claim 62, Langseth further discloses that the processing modules compute an average of input data and output the average at its the outputs at time intervals [e.g., col. 3, lines 51-53].

As to claim 64, except the features recited in claim 63, Langseth further discloses that the time intervals are hourly [e.g., col. 4, lines 55-63].

As to claim 65, except the features recited in claim 59, Langseth further discloses that the processing module comprise: (a) at least one end of run method to indicate that the processing module should output any remaining the at least one output datum [e.g., the end-of-the-day market information checking processing, col. 5, lines 21-25].

As to claim 66, except the features recited in claim 65, Langseth further discloses that the first subsystem executes the end of run method [e.g., col. 5, lines 11-28].

As to claim 84, except the features recited in claim 44, Langseth further discloses that the data processed by the system is ordered according to the time-stamp and provided to the processing modules in order [e.g., col. 7, lines 64-67].

Response to Arguments

Applicant's arguments filed 12/07/2005 have been fully considered but they are not persuasive.

The examiner disagrees with applicant arguments that "Langseth does not describe a system for processing time-stamped, time series data."

In reply to these arguments, the examiner points out that Langseth clearly discloses his system processes time-stamped data, for example, please refer to col. 3, lines 26-29], and time series data, for example, please refer to the time series data being displayed at the Daily Market Summary activity chart of Fig. 13.

As to the rest arguments, applicant merely rehashes issues already addressed above and on record.

Therefore, based on the discussion above, the rejections are sustained.

Application/Control Number: 10/046,907 Page 8

Art Unit: 2161

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Susan Y. Chen whose telephone number is 571-272-4016. The examiner can normally be reached on Monday - Friday from 7:00-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Safet Metjahic can be reached on 571-272-4023. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
